

Ideation Phase

Define the Problem Statements

Date	October 3, 2026
Team ID	SWTID-2026-7210
Project Name	Script Controlled ACL - Restrict Record Access Based On Field Value
Maximum Marks	2 Marks

Customer Problem Statement :

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Problem Statement Definition Matrix:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An Enterprise Data Compliance Officer or Database Administrator overseeing strict multi-tenant corporate privacy policies.	Dynamically restrict data visibility at a granular record level based on changing contextual row/field values (e.g., 'Status=Confidential' or 'Region=APAC').	The out-of-the-box system Access Control Lists (ACLs) only support role-based static table permissions, making conditional data masking incredibly complex.	Hardcoded roles fail to evaluate real-time data field properties dynamically, forcing teams to write messy workarounds or build fragmented custom logic.	Anxious about potential security breaches and highly frustrated by the rigid, unscalable native administrative workflows.
PS-2	A Full-Stack Enterprise Software Developer tasked with building custom access controls for high-security client applications.	Implement clean, maintainable script-driven rules that automatically process field changes to grant or deny access instantaneously.	Manually maintaining hundreds of distinct conditional rules slows down application performance and is prone to human error during deployment.	The existing infrastructure lacks an elegant, centralized scripting hook for access control evaluation during query execution cycles.	Overwhelmed by maintenance overhead and exhausted by fixing critical authorization bugs reactively.
